

SAFEMASTER Emergency Stop Module With Time Delay BH 5928, BI 5928

- According to
 - Performance Level (PL) e and category 4 to EN ISO 13849-1: 2008
 - SIL Claimed Level (SIL CL) 3 to IEC/EN 62061
 - Safety Integrity Level (SIL 3) to IEC/EN 61508 and IEC/EN 61511
- Output: 3 NO or 2 NO, 1 NC instantaneous contacts and 3 NO release delayed contacts
- Single and 2-channel operation
- Line fault detection on On-button, when On-button is connected to S33-S34
- Manual restart with button on S33-S34 or automatic restart with bridge between S13-S14
- With or without cross fault monitoring in the E-stop loop
- LED indication for supply, channel 1/2 and release delayed contacts
- Removable terminal strips
- Wire connection: also 2 x 1.5 mm² stranded ferruled (isolated), DIN 46 228-1/-2/-3/-4 or 2 x 2.5 mm² stranded ferruled DIN 46 228-1/-2/-3
- Width
 - BH 5928: 45 mm
 - BI 5928: 67.5 mm

Function Diagram

Approvals and Markings

* see variants

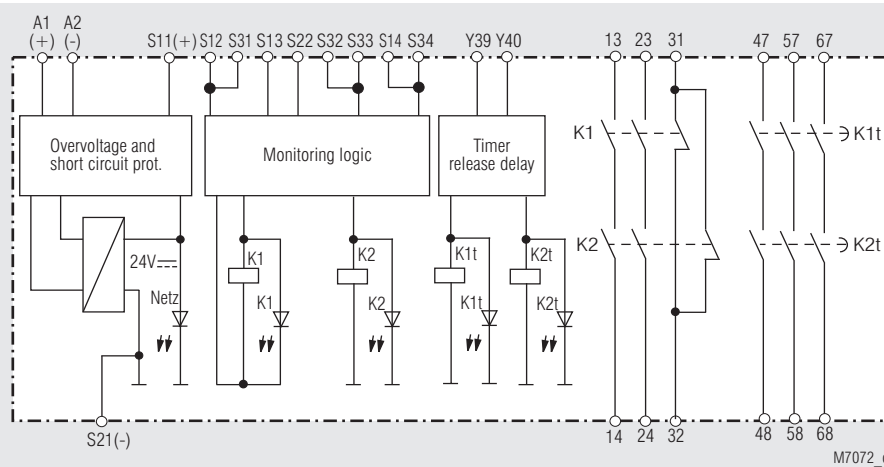

Applications

- Protection of people and machines
- Emergency stop circuits on machines, stop category 1 can be realised
 - Monitoring of safety gates

Indication

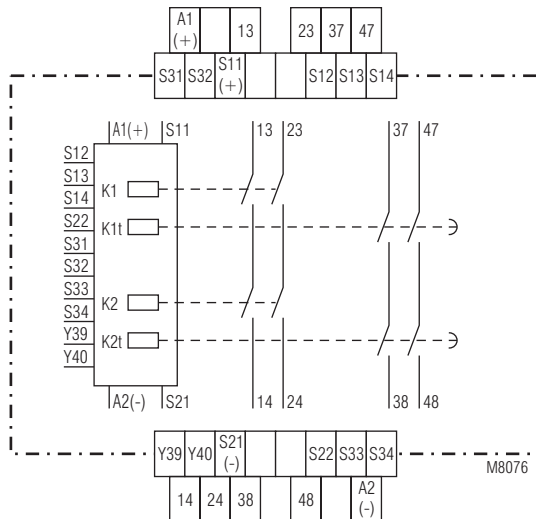

LED power: on, when supply connected
LEDs K1, K2: on, when relay K1 and K2 resp. K1_t and K2_t energized

Connection Terminals	
Terminal designation	Signal designation
A1(+)	+ / L
A2 (-)	- / N
S12, S14, S22, S31, S32, S34, Y39	Inputs
S11, S13, S21, S33, Y40	Outputs
13, 14, 23, 24, 33, 34	Positive driven NO contacts for release circuit
37, 38, 47, 48, 57, 58, 67, 68	NO contacts, delay
31, 32, 41, 42	Positive guided indicator output

Notes

To select automatic restart terminals S13 - S14 must be bridged, S33 - S34 must be opened. Open terminals S13 - S14 select manual restart, the On-button must then be connected to S33 - S34.

Line fault detection on On-button:

The line fault detection is only active when the time delayed relays K1₁ and K2₁ have released and then S12 (channel A) and S32 (channel B) are switched simultaneously. If the On-button is closed before S12, S31, S32 is connected to voltage (also when line fault across On-button), the output contacts will not close. The unit will not restart before the time delay is finished.

A line fault across the On-button which occurred after activation of the relay, will be detected with the next activation and the output contacts will not close. If a line fault occurs after the voltage has been connected to S12, S31, S32, the unit will be activated because this line fault is similar to the normal On-function.

The unit can be operated with single channel and 2-channel operation with cross fault monitoring. For connection please refer to application examples.

The gold plated contacts of the BH 5928 mean that this module is also suitable for switching small loads of 1 mVA - 7 VA, 1 mW - 7 W in the range 0.1 - 60 V, 1 - 300 mA. The contacts also permit the maximum switching current. However since the gold plating will be burnt off at this current level, the device is no longer suitable for switching small loads after this.

The terminal S21 permits the operation of the device in IT-systems with insulation monitoring, serves as a reference point for testing the control voltage and is used to connect the E-stop loop when cross fault monitoring is selected.

Connecting the terminal S21 to the protective ground bridges the internal short-circuit protection of Line A2(-). The short-circuit protection of line A1(+) remains active.

ATTENTION - AUTOMATIC START!

According to IEC/EN 60 204-1 part 9.2.5.4.2 it is not allowed to restart automatically after emergency stop. Therefore the machine control has to disable the automatic start after emergency stop.

Y39 - Y40 must be closed to have timed outputs. By opening the bridge between Y39 and Y40 the time delay can be interrupted immediately. Without bridge the contacts switch without delay.

The time setting has to be sealed by the user after test.

Technical Data

Input

Nominal voltage U_N:

BH 5928: DC 24 V, AC/DC 24 V

BH 5928.92/900,

BI 5928.47/100: DC 24 V

Voltage range: DC AC/DC

at 10% residual ripple: 0.9 ... 1.1 U_N 0.95 ... 1.1 U_N

at 48% residual ripple: 0.8 ... 1.1 U_N 0.8 ... 1.1 U_N

Nominal consumption: AC approx. 6.0 VA

DC approx. 3.5 W

Nominal frequency: 50 / 60 Hz

Min. Off-time: 1 s

Control voltage on S11: DC 23 V at U_N

Control current over

S12, S32: 40 mA at U_N each

Min. voltage on

S12, S32: DC 21 V when relay activated

Short-circuit protection: Internal PTC

Overvoltage protection: Internal VDR

Output

Contacts

BH 5928.47, BI 5928.47/100: 3 NO, 1 NC contacts instantaneous and 1 NO contact release delayed

BH 5928.91: 2 NO contacts instantaneous, and 2 NO contacts release delayed

BH 5928.92 2 NO, 1 NC contacts instantaneous and 3 NO contacts release delayed

BH 5928.93: 3 NO contacts instantaneous and 3 NO contacts release delayed

ATTENTION! The NC contacts 31-32 or 41-42 can only be used for monitoring.

Operate delay typ. at U_N:

Manual start: 40 ms

Automatic start: 500 ms

Release delay typ. at U_N:

Disconnecting the supply: 40 ms

Disconnecting

S12, S22, S31 and S32: 15 ms

Time delay t_v

(release delayed):

Auxiliary supply must be connected for time delay

Time ranges:

0.1 ... 1 s 3.0 ... 30 s

0.3 ... 3 s 6.0 ... 60 s

0.5 ... 5 s 30 ... 300 s

1.0 ... 10 s

NO contact 57/58: 1 A / DC 24 V IEC/EN 60 947-5-1

Technical data that is not stated in the CCC-Data, can be found in the technical data section.

Standard Type

BH 5928.93 DC 24 V 0.5 ... 5 s

Article number:

0050369

- Output: 3 NO contacts instantaneous and 3 NO contacts release delayed

- Nominal voltage U_N : DC 24 V
- Time delay t_v : 0.5 ... 5 s
- Width: 45 mm

Variants

BH 5928.____/____/61: with UL approval
BH 5928.____/001: with fix time delay

fixed times: 1 s, 3 s, 5 s, 10 s, 300s
other times on request
with adjustable time delay
suitable for light curtains and
reed contacts switches
with adjustable time delay
tolerates voltage drop
up to 6 V in e-stop circuit

Characteristics

Arc limit curve for resistive load (instantaneous contact)

Arc limit curve for resistive load (delayed contact)

$$\Sigma I^2 = I_1^2 + I_{2...6}^2$$

$I_i \div I_6$ - Current in contact paths

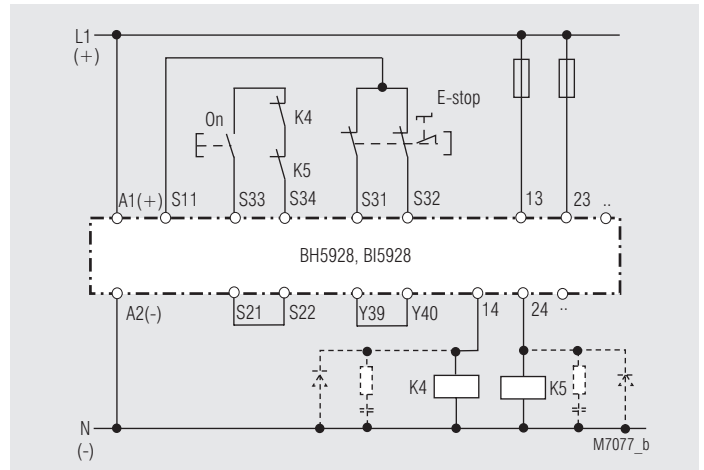

Max. current at 55°C over 3 contact paths = 0,5 A $\hat{=}$ 0,5² x 6 = 1,5 A²

Quadratic total current limit curve

Application Examples

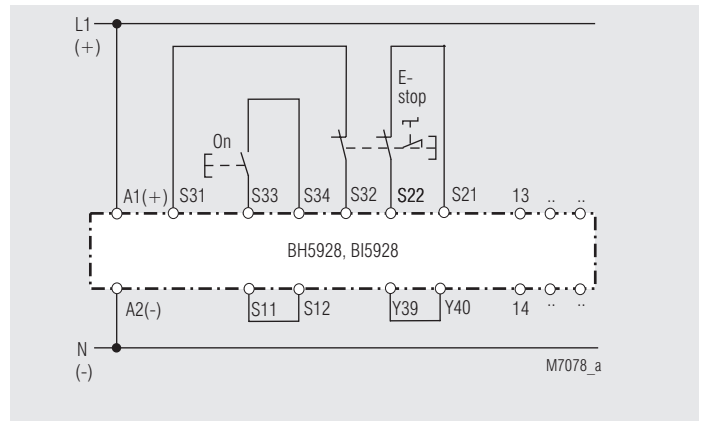

Single channel emergency stop circuit. This circuit does not have any redundancy in the emergency-stop control circuit
Suited up to SIL2, Performance Level d, Cat. 3

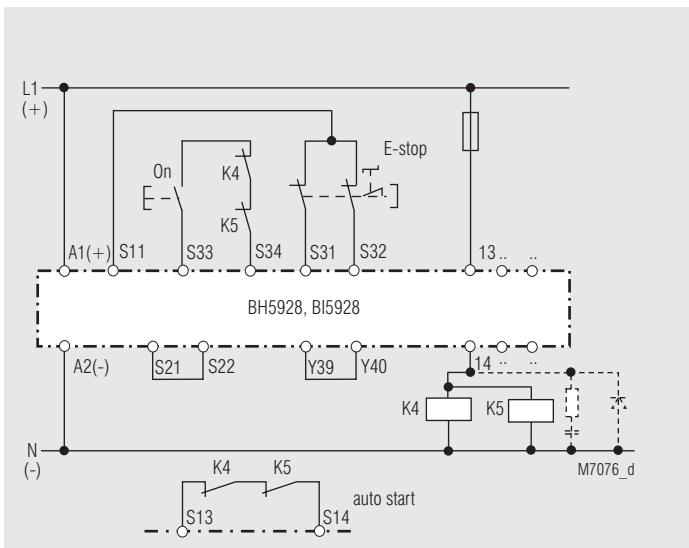

Contact reinforcement by external contactors, 2-channel controlled. The output contacts can be reinforced by external contactors with forcibly guided contacts for switching currents > 5 A.
Functioning of the external contactors is monitored by looping the NC contacts into the closing circuit (terminals S13-S14 or S33-S34)
Suited up to SIL3, Performance Level e, Cat. 4

2-channel emergency stop circuit without cross fault monitoring autostart and interruption of time by S1
Suited up to SIL3, Performance Level e, Cat. 4

2-channel emergency stop circuit with cross fault detection
Suited up to SIL3, Performance Level e, Cat. 4

Contact reinforcement by external contactors controlled by one contact path. S33 - S34 must be opened
Suited up to SIL3, Performance Level e, Cat 4, if the external contactors are in the same cabinet and the wiring is short circuit and crossfault prove.

2-channel safety gate monitoring
Suited up to SIL3, Performance Level e, Cat. 4
