

**MINISTOP**  
**Motor Brake Relay**  
**BN 9034, GB 9034**

- DC brake with one way rectifier up to 600 A
- Can be used on all asynchronous motors
- Easy to fit also into existing control circuits
- Wear and maintenance free
- Integrated braking contactor for devices up to 60 A
- Mounting on 35 mm DIN-rail for 25 A units
- Adjustable braking current
- With automatic standstill monitoring
- as option with start-delta start function
- as option with thermistor motor protection
- as option with wide voltage input
- BN 9034: 200 ... 575 V
- GB 9034: 200 ... 690 V
- width max. 310 mm

**Function Diagram**

**Approvals and Marking**

**Application**

- Saws
- Centrifuges
- Woodworking machines
- Textile machines
- Transportation conveyors

**Function**

The supply voltage is connected to terminals L1-L2. The interlock contact for the motor contactor closes. The LED „ready“ indicates that the supply voltage is connected. The motor can be started with the start button. The DC voltage for the motor windings UV is supplied from T1-T2. The external braking contactor (Devices for > 60 A) is controlled by contact 1-2. This contact is timed in a way, that a safety time is provided between reset of the motor contactor and start of the brake contactor. This is necessary to avoid damage of the semiconductors by induced back EMF voltage. The timing of the different functions during braking is as follows: The motor contactor is switched off and disconnects the motor. After elapse of the safety time, the brake contactor is energized and shortly after that the brake current is switched on for the adjusted braking time.

**Circuit Diagrams**

BN 9034

GB 9034

## Indicators BN 9034

LED „ready“:	On, when supply voltage connected flashing, when braking current is adjusted too high.
LED „I“:	On, when braking current is flowing.

## Notes

For optimum braking effect, the braking current should be 1,8 ... 2 times the nominal motor current. This current corresponds to the necessary saturation current of the magnetic field needed for braking. Higher currents show not much more effect, but will heat up the motor. A better braking effect is achieved by using more than one motor winding for braking. The permitted braking ration relates to the braking current, the ambient temperature and the brake model.

**ATTENTION** The terminal W or T3 serves as measuring input for the standstill monitoring, with 2.5 mm<sup>2</sup> max. cross section. With devices for > 40 A a fuse must be used to protect this connection wire at the point where the wire with smaller cross section is connected to the motor line. The choice of the fuse is suited to the used crossed section and serves the short circuit protection of the line.

Wire connection configuration

### Standard Type

BN 9034 25 A AC 400 V 50/60 Hz 15 s

Article number:

- Integrated braking contactor
- Mounting on 35 mm DIN-rail
- Width: 100 mm

### Variant

BN 9034 /

The 4 options can be ordered single or in combinations.

The variant with wide voltage input needs an auxiliary supply of AC 230 V or AC 24 V.

BN 9034 / 25 A AC 400 V 50 / 60 Hz 15 s

### Inputs BN 9034

Opening the contact on terminal X3 and X4 makes the device ready for braking. When the contact is closed the braking current starts to flow. X14-X15 monitors the motor temperature (option)

### Outputs BN 9034

- X5, X6: Interlock for monitor contactor
- X16, X17: Standstill indication (option)
- X7, X8: Fault indicating output
- X11, X12: Control of Y-contactor (option)
- X12, X13: Control of Δ-contactor (option)

### Setting facilities BN 9034

Potentiometer	function	initial setting
I	braking current	left end of scale
t <sub>1</sub>	braking time	middle of scale
n <sub>0</sub>	standstill level	middle of scale
t <sub>2</sub>	2. braking time	left end of scale

### Standard Type

GB 9034 100 A AC 400 V 50/60 Hz

Article number: 0056975

- Screw fixing M5
- Width: 110 mm

### Variant

GB 9034 /

The 4 options can be ordered single or in combinations.

The variant with wide voltage input needs an auxiliary supply of AC 230 V.

GB 9034 / 100 A AC 400 V 50 / 60 Hz

### Inputs GB 9034

- Z3, Z4: Motor PTC
- Z1, Z2: Braking interrupt
- Z1, X3: 2. braking time
- 6,7: Start of braking

### Outputs GB 9034

- 1,2: External braking contactor
- 8,9: Interlock for motor contactor
- 33,34: Fault indication output
- 43,44: Control of Y-contactor (option)
- 43,45: Control of Δ-contactor (option)
- 13,14: Standstill indication (option)
- 13,24: Braking current too low (option)

### Set-up Procedure

The braking time cannot be set on the unit BN 9034. It is limited by the standstill detection. If the feedback input T3 is not connected to terminal W of the motor the standstill detection is disabled and the internal max. braking time of 15 s is valid. The GB 9034 allows to set different braking times and can be used for standstill depending as well as time depending braking function. More details are available in the operating manual.

With potentiometer I the braking current can be adjusted. With a current meter (true RMS) the current should be measured so that 2 times the braking current is not exceeded in order not to overheat the motor. The braking device cannot be overloaded, as it limits the current even on full potentiometer setting to the nominal current of the unit. This status is indicated by the flashing „ready“ LED.

### Connection example

for BN 9034 25 A

### Connection examples

for GB 9034 40 A, 60 A

for GB 9034 from 100 A
