IL 9059, SL 9059

OA 9059/001

Your Advantages

- protects mobile equipment against damage or destruction coming from wrong phase sequence
- OA 9059: reduced wiring by mounting directly in the motor connection box

## Features

- According to DIN EN 60255
- Detection of incorrect phase sequence
- No separately auxiliary voltage necessary
- Nominal voltage range 3 AC 380 ... 690 V
- Suitable for operation with inverters ( $\mathrm{f}=40 \ldots 80 \mathrm{~Hz}$ )
- Relay output:
- IL/SL 9059: 1 changeover contact
- OA 9059: 1 NC contact
- Extended temperature range
- Devices available in 3 enclosure versions:

IL 9059: depth 59 mm , with terminals at the bottom for installation systems and industrial distribution systems according to DIN 43880

## SL 9059: depth 98 mm, with terminals at the top for cabinets

 with mounting plate and cable duct- OA 9059: sealed modul with stranded wire connection suitable for mounting in terminal box
- Width
- IL/SL 9059: 35 mm
- OA 9059: 62 mm

## Approvals and Marking

## Applications

In many application with pumps, conveyors and fans efficient monitoring systems should help to detect failures and misfunctions in time, to avoid damage and long times of non-operation.
Besides speed and frequency the monitoring of phase sequence is very important
The phase sequence relay with it's wide voltage range of 3AC380-690V detects a wrong phase sequence and signals via a galvanically separated relay contact the wrong rotation of a motor
By integrating the relay output into the enabling circuit of a plant, the unit disables the start of the plant in the case of wrong phase sequence. especially portable equipment can be protected in this way.

## Indication

2-colour LED at IL/SL 9059
green:
correct phase sequence
contacts 11-14 closed
red: incorrect phase sequence contacts 11-12 closed
